SUSTAINABILITY WHEN REPLACING TABSYS WITH MAINTABLE

MainTable is the ideal tool for a uniform, optimized maintenance of table data from relational databases. In line with our company motto, it guarantees „better organized information“ in your company.

MainTable is optimized to replace the maintenance part of a TABSYS table system.

If you want to replace the entire TABSYS table system - i.e. both the maintenance and access part - our table management system TABEX4 offers a comfortable switch to a modern and sustainable system.

YOUR REQUIREMENTS

You are using TABSYS for data maintenance of tables and you want to switch to another table maintenance system?

You want to use a uniform user interface on all operating systems for your data maintenance?

Do you need extensive functionalities for data maintenance?

MainTable meets your requirements.

You will benefit from:

1. User-friendliness
2. Company-wide use
3. Control of all data changes
4. Revision security
5. Customization
6. Stability and reliability

1 User-friendliness

MainTable offers maximum user-friendliness with a uniform, ergonomic user interface for all operating systems.

In addition to a logical and clear structure, MainTable uses familiar elements of various operating systems. Icons and hotkeys are provided for all common functions. Context-related operating elements increase the clarity.

The intuitive user interface allows data maintenance to be quickly outsourced to individual departments after a short training period, thus saving valuable time and resources.

2 Company-wide use

MainTable allows the connection of an unlimited number of different databases and supports a variety of operating systems:

- Supported databases: DB2, Oracle, Microsoft SQL Server, MySQL, PostgreSQL and Informix
- Supported operating systems: z/OS, BS2000, VSE, Linux, AIX, Solaris and Windows

Due to its platform independence, MainTable can be used company-wide.

3 Control of all data changes

MainTable provides the option of locking an entire table or individual table rows while processing. Based on concurrent use, MainTable uses an internal system to ensure that different users cannot make simultaneous changes. This safely and reliably prevents unintentional overwriting of changes.

4 Revision security

Complete revision security is offered through approval procedures based on a multiple control principle, complete logging, check for referential integrity and data checks using your own validation rules. Revision logs provide a complete overview of all data changes.

Evaluations of the revision logs for each batch job are also possible.

5 Customization

The authorization system, user groups, roles and multi-tenant capability enable optimal use in your company. External authorization systems such as z/OS-RACF can also be connected. The user interface can be individually adapted to your company's internal organizational units.

6 Stability and reliability

MainTable guarantees stability and reliability. It is based on TABEX4, BOI's high-performance standard product. For four decades, TABEX4 and its product predecessors have been in successful and stable productive use at numerous top companies.

MainTable is largely independent of changes in the operating system and thus allows sustainable and reliable use for many years.

Would you also like to replace the access part of TABSYS?

With our table management system TABEX4, this is also possible in an uncomplicated and easy way. TABEX4 is the leading cross-platform standard software for table access with highest performance.

We are happy to advise you on possible applications.

Easy Switch

Once you have chosen MainTable, you can switch from MainTable to TABEX4 at any time and benefit from its outstanding performance advantages.

MainTable and TABEX4 - Products of BOI Software Entwicklung und Vertrieb GmbH

BOI Software Entwicklung und Vertrieb GmbH has proven its extensive know-how in numerous projects and expanded it in long-term relationships with well-known customers from various industries.
