

## MAINTABLE

### OPTIMAL MAINTENANCE OF YOUR TABLE DATA

#### A uniform maintenance interface for your relational databases.

Do you use relational databases? Are you looking for an easy and reliable tool to manage your table data?

MainTable is ideal for maintaining table data from relational databases. In accordance with our motto it guarantees „Better organized Information“ in your company.

#### Faciliate maintaining tables from relational databases.

Some databases don't come with an user interface, or a form needs to be created and maintained for every table.

MainTable faciliates that: With its web-based user interface, maintaining tables from relational databases becomes easy and safe - and completely independent from complicated table-specific forms.

Thanks to its intuitive structure, all functions can be leared easily and in remarkably short time – going easy on precious resources.

#### Use MainTable company-wide.

MainTable connects to an unlimited number of various databases and supports many operating systems:

- supported databases: DB2, Oracle, Microsoft SQL Server, MySQL, PostgreSQL and Informix
- supported operating systems: z/OS, BS2000, VSE, Linux, AIX, Solaris and Windows

#### Control every data change.

MainTable provides the option of locking an entire table while processing. MainTable uses an internal system to ensure that different users cannot make simultaneous changes. This safely and reliably prevents unintentional overwriting of changes.

## MAINTABLE VERSIONS

MainTable comes in three versions:

### 1. MainTable Basic: For your comfortable data maintenance

MainTable Basic is ideal if you are looking for an easy, basic way to maintain tables from relational databases.

MainTable Basic provides functions for connecting and displaying data, as well as basic maintenance functions including sorting, searching and filtering. Print/export/import functions for CSV, XLS, PDF and text files are also available, and you may copy table rows between different relational databases.

### 2. MainTable Advanced: For your organizational requirements

MainTable Advanced adjusts perfectly to your corporate organization.

The authorization system, user groups, roles and multi-tenant capability enable optimal use in your company. External authorization systems such as z/OS-RACF can also be connected. The user interface can be individually adapted to your company's internal organizational units.

### 3. MainTable Security: For your requirements on data security

MainTable Security enables absolute revision security through approval procedures based on a multiple control principle, complete logging and in RDB defined checks for referential integrity. Revision logs provide a complete overview of all data changes.

Evaluations of the revision logs for each batch job are also possible.

## Easy Upgrade

Start with MainTable Basic and switch quickly and easily to one of the other variants as your requirements increase!

No reinstallation is required when you upgrade from MainTable Basic to MainTable Advanced or MainTable Security. It is sufficient to upload a new license file. That can be done easily anytime.
